Finmark KPI Dashboard

Latest completed quarter: Q1 2025 | CSAT through April 2025

Data as of May 2025

CUSTOMER RETENTION
51.0%
Q1 2025 | 25 of 49
P1 target: keep Q2 at 51%+

AVG REVENUE / CLIENT
$69,523
Q1 2025 completed
Hold near $67k-$69.5k

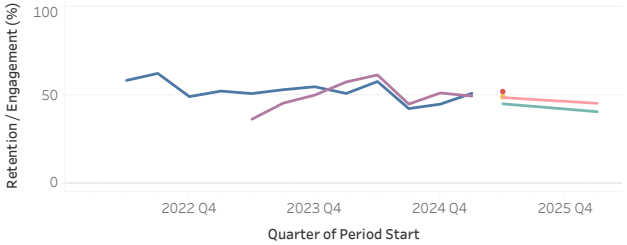

CLIENT GROWTH RATE
11.0%
+9 clients (base 91)
Rate slowing; count still rising

CUSTOMER ENGAGEMENT
49.5%
Q1 2025 | 45 of 91 engaged
Q2 target at least 52%

CUSTOMER SATISFACTION
4.14 / 5
April 2025 | 7 dated ratings
Do not manage to 5.00 forecast

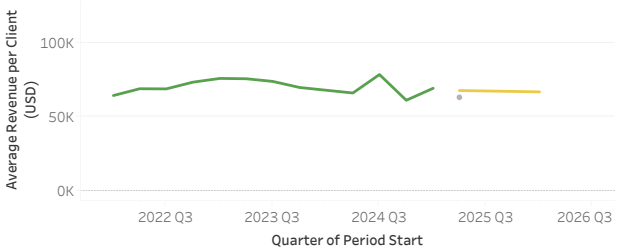

Retention and Engagement Trend

Completed actuals, partial Q2 check, forecast and 95% interval

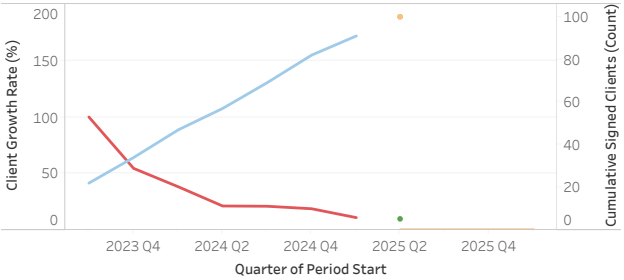

Average Revenue per Client

Currency axis; partial Q2 sits below the forecast band

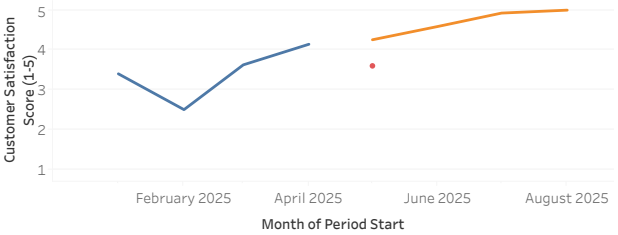

Client Growth Rate vs Signed Clients

CGR % can fall while the client count is still rising

Customer Satisfaction Score

Required 95% band: almost the full 1-5 scale

DECISION CENTER | Ranked Management Actions

Kpi Code	Business Issue	Specific Action	Timeline	Kpi Target	Expected Impact	
CRR	Retention is the highest-priority operating risk.	Assign account owners to every Q1-active client with no Q2 engagement and complete a re-engagement contact before quarter-end.	Start immediately; complete outreach before Q2 2025 close.	Keep completed Q2 CRR at least 51.0%, not the 40.6% model path.	Protects roughly 5 repeat clients and recurring relationship value heading into Q3.	1
CER	Nearly half of eligible clients are not using services in a typical quarter.	Create inactivity alerts and send personalized service recommendations to eligible clients with zero current-quarter activity.	Launch alerts this week; review weekly until Q2 close.	Raise completed Q2 CER to at least 52.0% (current partial check).	Converts inactive signed clients into current users and supports later retention.	2
CGR	CGR % is slowing, but the client count is still rising.	Set a quarterly net-client target and run referral plus industry/region campaigns. Do not treat a lower CGR % as a shrinking base.	Lock the Q2 net-client target this week; review at Q2 close.	At least +9 net new signed clients in completed Q2 2025.	Keeps acquisition on the recent headcount pace while the percentage naturally decelerates.	3
ARPC	Headline ARPC is usable, but service-level decisions are not.	Complete the PROD006-PROD020 service master before pricing changes, and review accounts below the ~$67,000 forecast range for bundling.	Finish the service master within 30 days; complete below-range account reviews by Q2 close.	Hold completed quarterly ARPC near $67,000-$69,500 after Q2 close.	Prevents understated joined ARPC and focuses cross-sell on true low-value accounts.	4
CSAT	CSAT is too sparse to manage against the 5.00 forecast.	Require a unique feedback ID, rating, and timestamp. Review ratings of 1-2 within five business days. Recalculate CSAT only after each month closes.	Turn on required-field validation this month; first cleaned monthly restatement after June close.	Do not use the 5.00 forecast as a target. Keep monthly CSAT at least 4.00 once the dated sample is large..	Stops overreacting to a wide CSAT interval and builds a sample that can support service-quality decisions.	5
